Marwadi
University

Rajkot-Morbi Road, At & PO : Gauridad, Rajkot 360 003. Gujarat. India.

Faculty of Computer Applications (FCA)

Certificate

This is to certify that the project work entitled
Employee Management
submitted in partial fulfillment of the requirement for
the award of the degree of
Bachelor of Computer Application
of the
Marwadi University

is a result of the bonafide work carried out by
Divy Palejiya(92200527240)
Divyesh Gangah(92200527243)
Aryan Ponkiya(92200527253)

during the academic year 2023-24

DECLARATION

I/We hereby declare that this project work entitled **Employee Management System** is a record done by me.

I also declare that the matter embodied in this project is genuine work done by me and has not been submitted whether to this University or to any other University / Institute for the fulfillment of the requirement of any course of study.

Place : Marwadi University – Rajkot

Date : 10/4/2024

CONTENTS

Date	Details of Reviews & Submissions
15/01/2024	Details / Documents to be Submitted • Project title and definition, • Project group details with group members
15/02/2024	First Review (Project Progress Presentation) Project Details • Synopsis • Project Description • Description of Each Module in Detail Diagrams as applicable • Flowchart • Data Flow Diagram, Use Case Diagram, Sequential Diagram, Class Diagram, Activity Diagram • GUI designs Database Structure (as applicable) • Description of File or Tables *Students are allowed to draw the applicable diagrams studied till previous semester
30/03/2024	Second Review (Project Coding and Implementation) and documentation • Demonstration of bug free working Project, • Verification of Project report document by Internal guide.
15/04/2024	Final Review (Final Review Presentation) • Submission of bug free working Project (Source Code) • Submission of Project Presentation (PPT) • Submission of final version of project report document (soft copy) in word and PDF format *Students have to submit all the mentioned documents to their respective guides

1. PROJECT DETAILS

1.1 SYNOPSIS

The Employee management system is a software that shows you all information about entered employee detail. Our project aims to create an interactive and informative digital employee management system that stores all entered employee information. We save employee's ID, Name, Department, Joining Date, Gender, Salary and many other things about employee. And after that you can Remove/Delete the this that you want.

1.2 PROJECT DISCRIPTION

The Employee management system is designed to get all information about entered employee detail. It saves more employee than a simple employee system. It is useful to save all information about employee and make changes on it. Many companies can use this management system and manage their all employee. It saves employee's ID, Name, Department, Joining Date, Gender, Salary and many other things about employee. And after that you can Remove/Delete the this that you want.

1.2 DESCRIPTION OF MODUEL

1 Main Method (main method):

- Responsible for initializing the database (Database.dbInit()) before launching the Swing application.
- Launches the main window (Employee Management class).

2 Employee Management Class:

- Represents the main class for the Employee Management System.
- Initializes the main JFrame and handles the overall organization of the GUI components.

3 Initialization (initialize method):

- Sets up the main JFrame for the application, including its title, size, and layout.
- Creates and configures UI components such as text fields, labels, buttons, and the JTable.

4 Input Panel:

- Contains input fields for entering employee details (ID, name, department, etc.).
- Provides buttons for inserting and updating employee records.
- Displays a title at the top using a JTextArea.

2. DIAGRAM AS APPLICABLE

2.1 ALGORITHM AND FLOWCHART

- **Algorithm**

Step 1: Start.

Step 2: Enter employee info that you want to find (Otherwise go to step).

Step 3: Print the employee detail

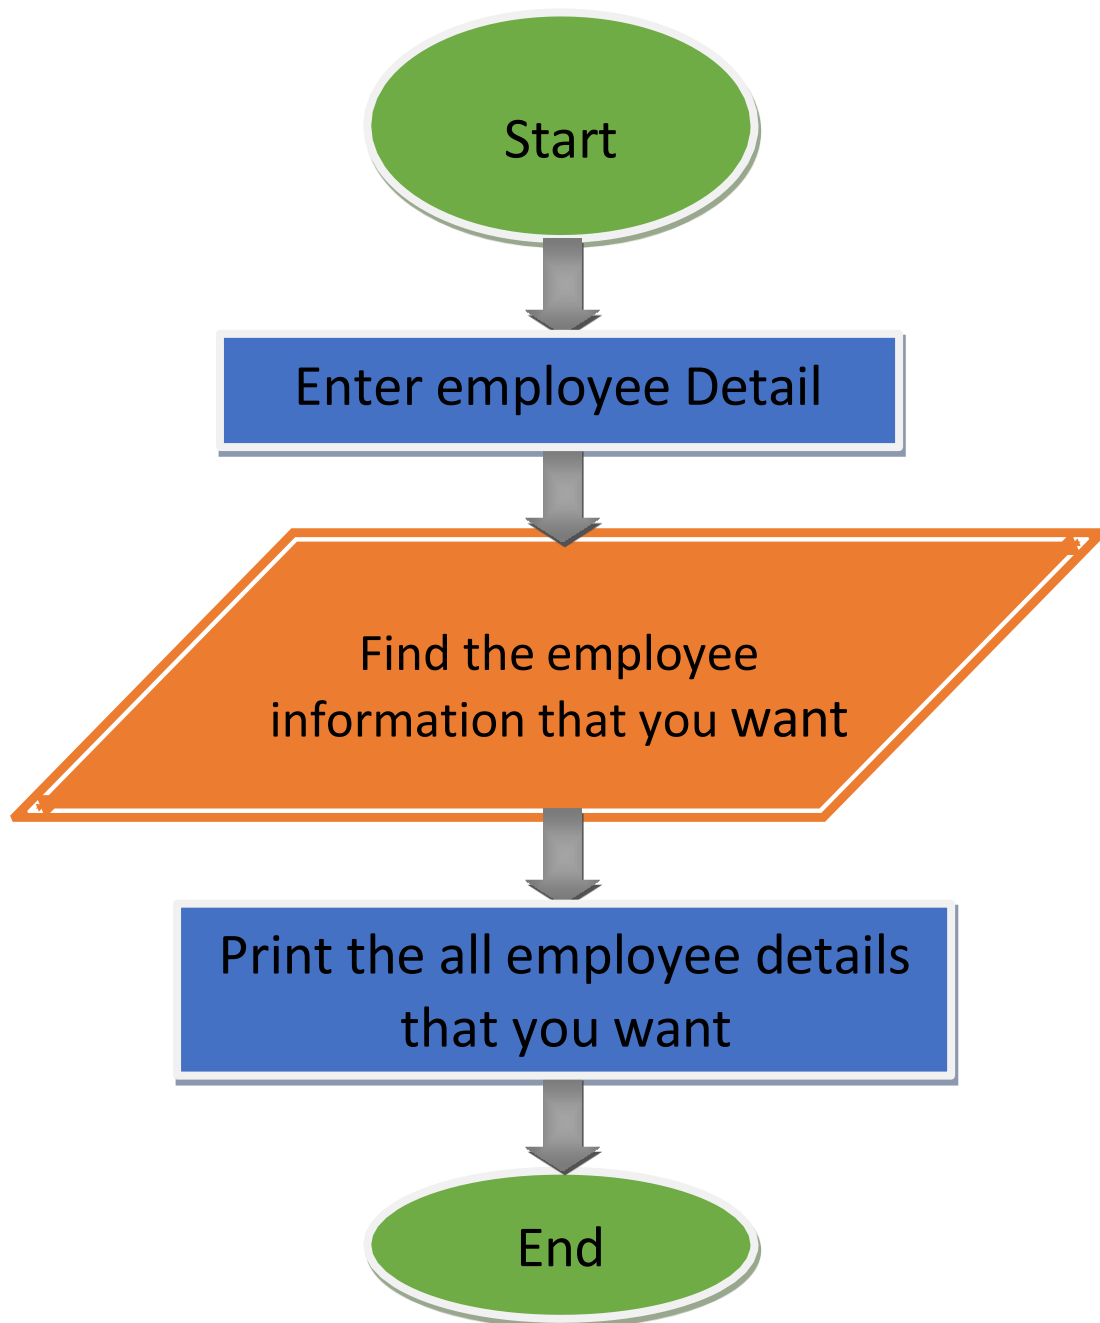

Step 4: Get all information about employee.

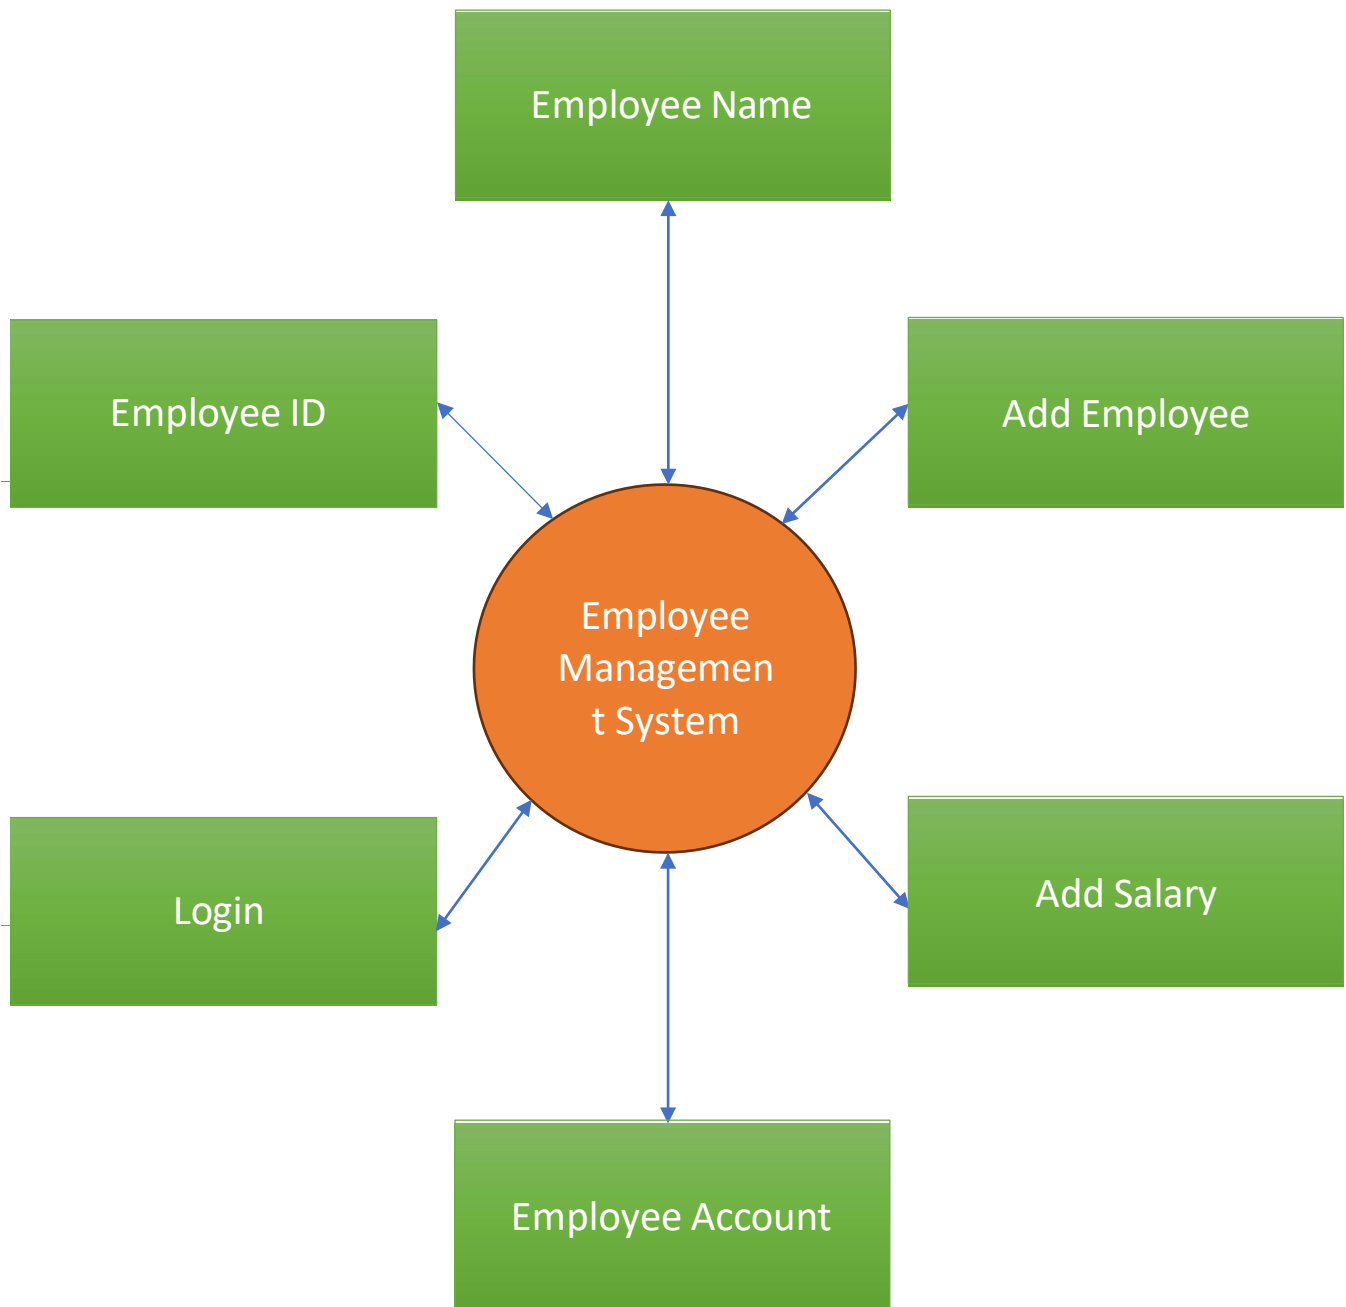

Step 5: End

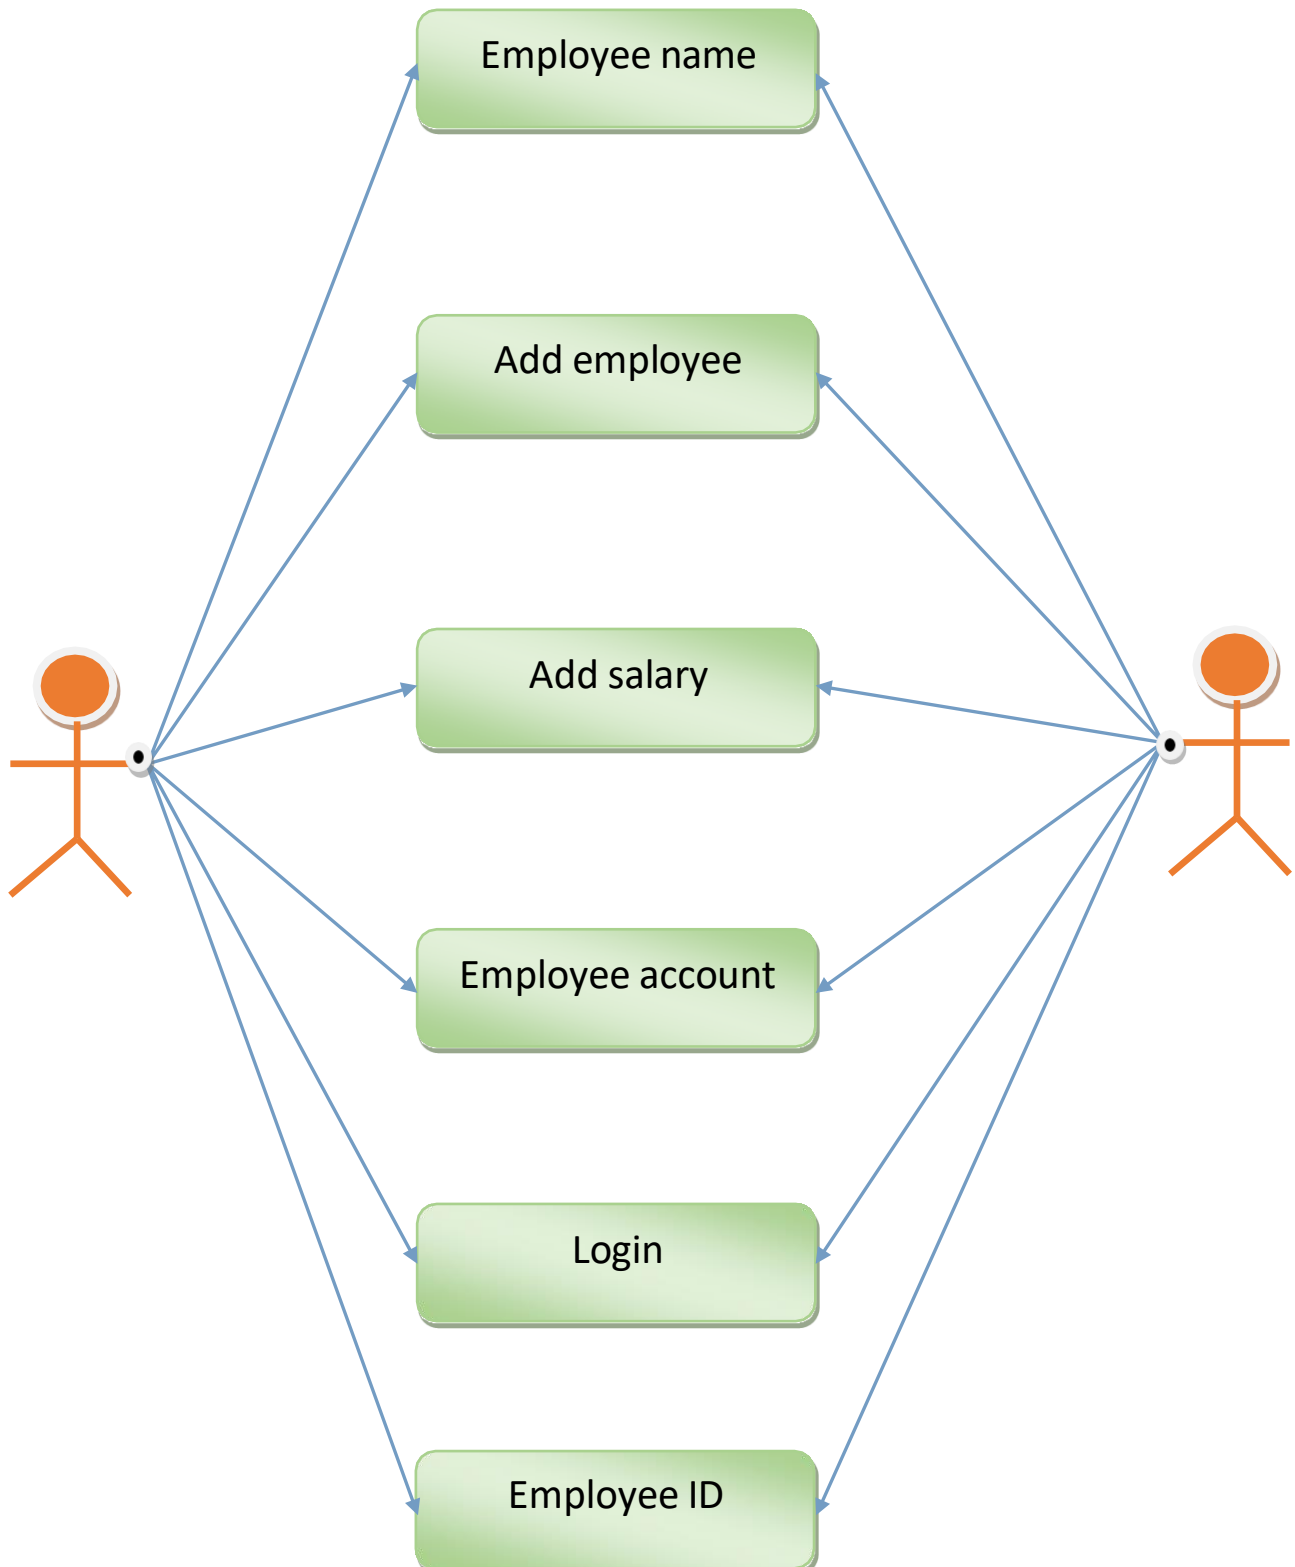

- FLOWCHART

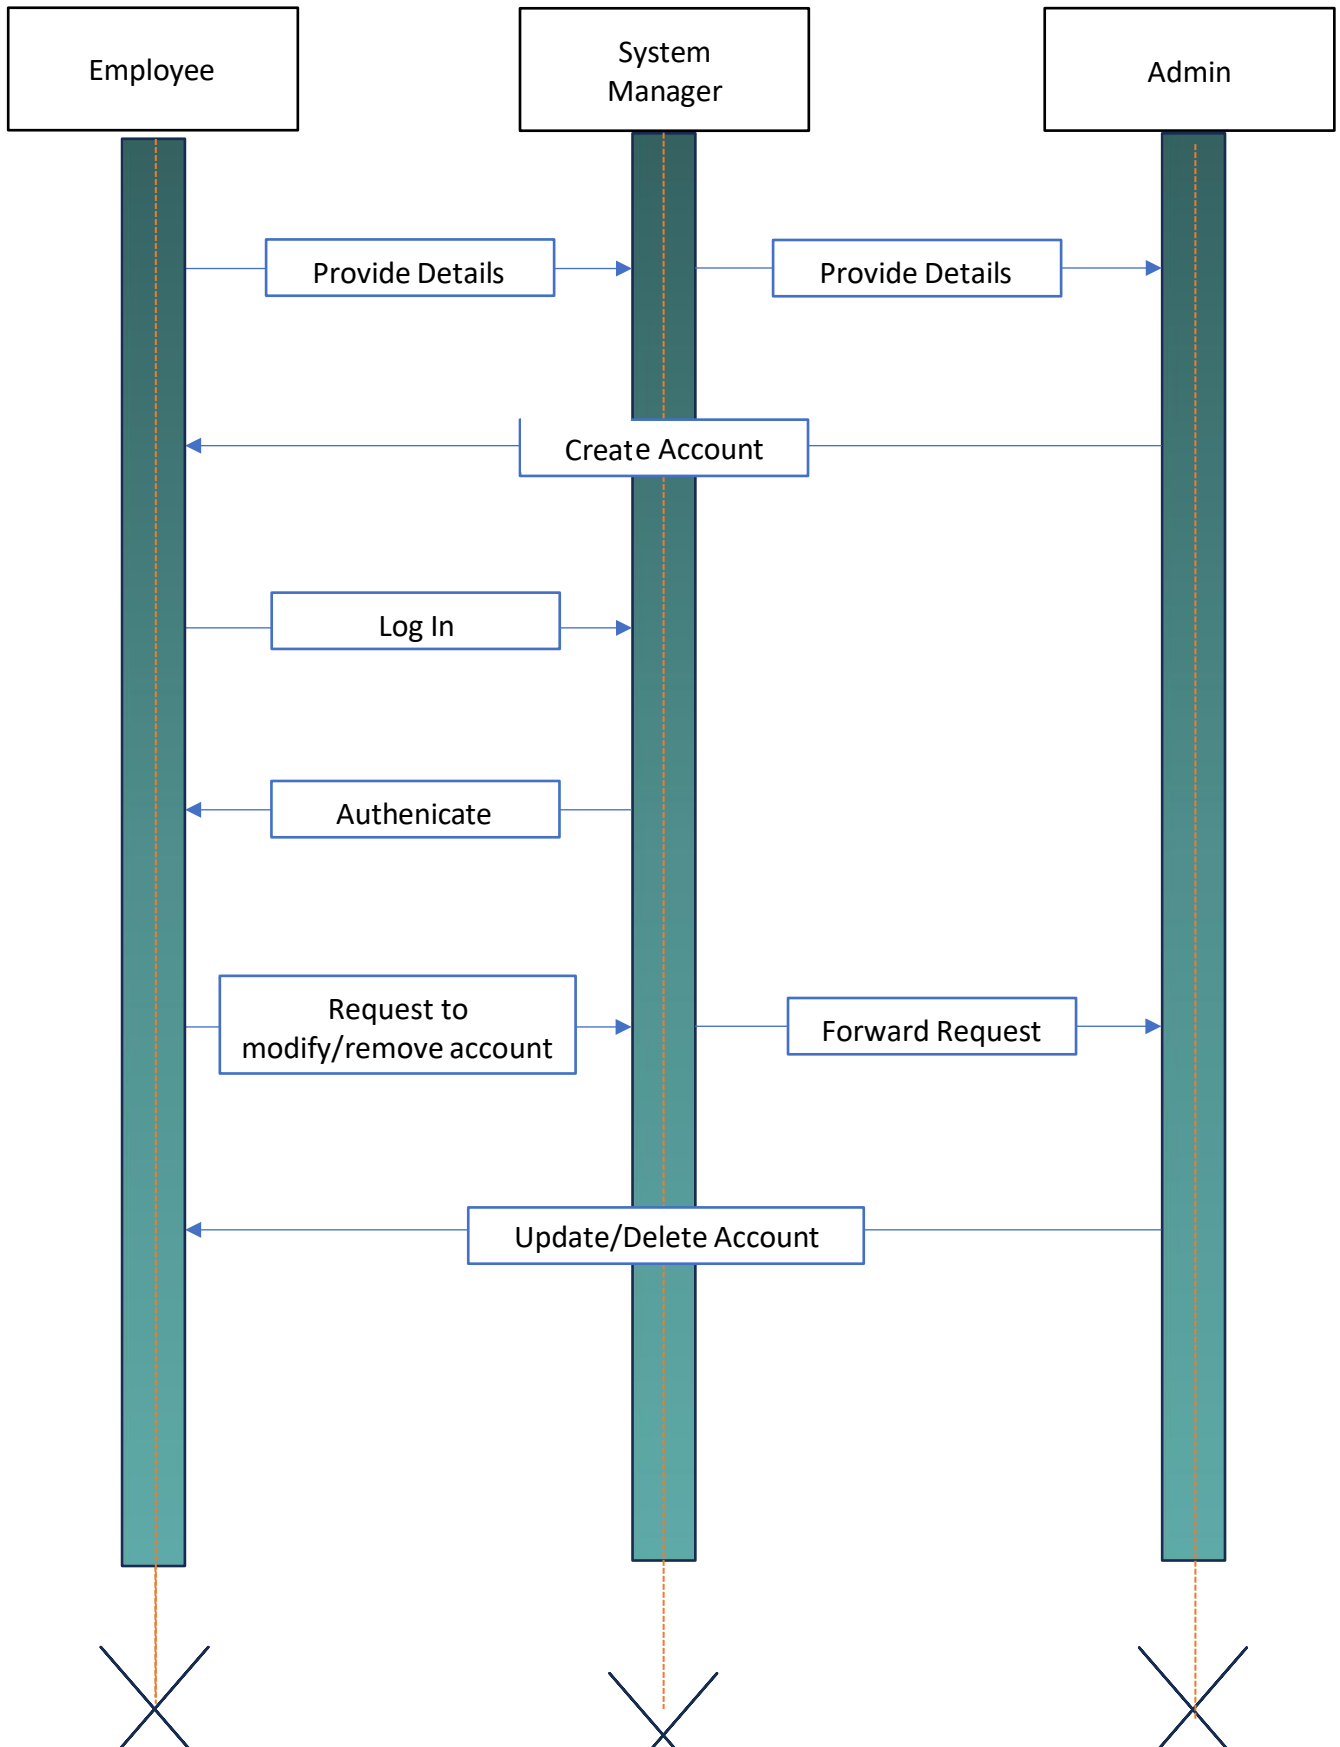

- **DATAFLOW DIAGRAM**

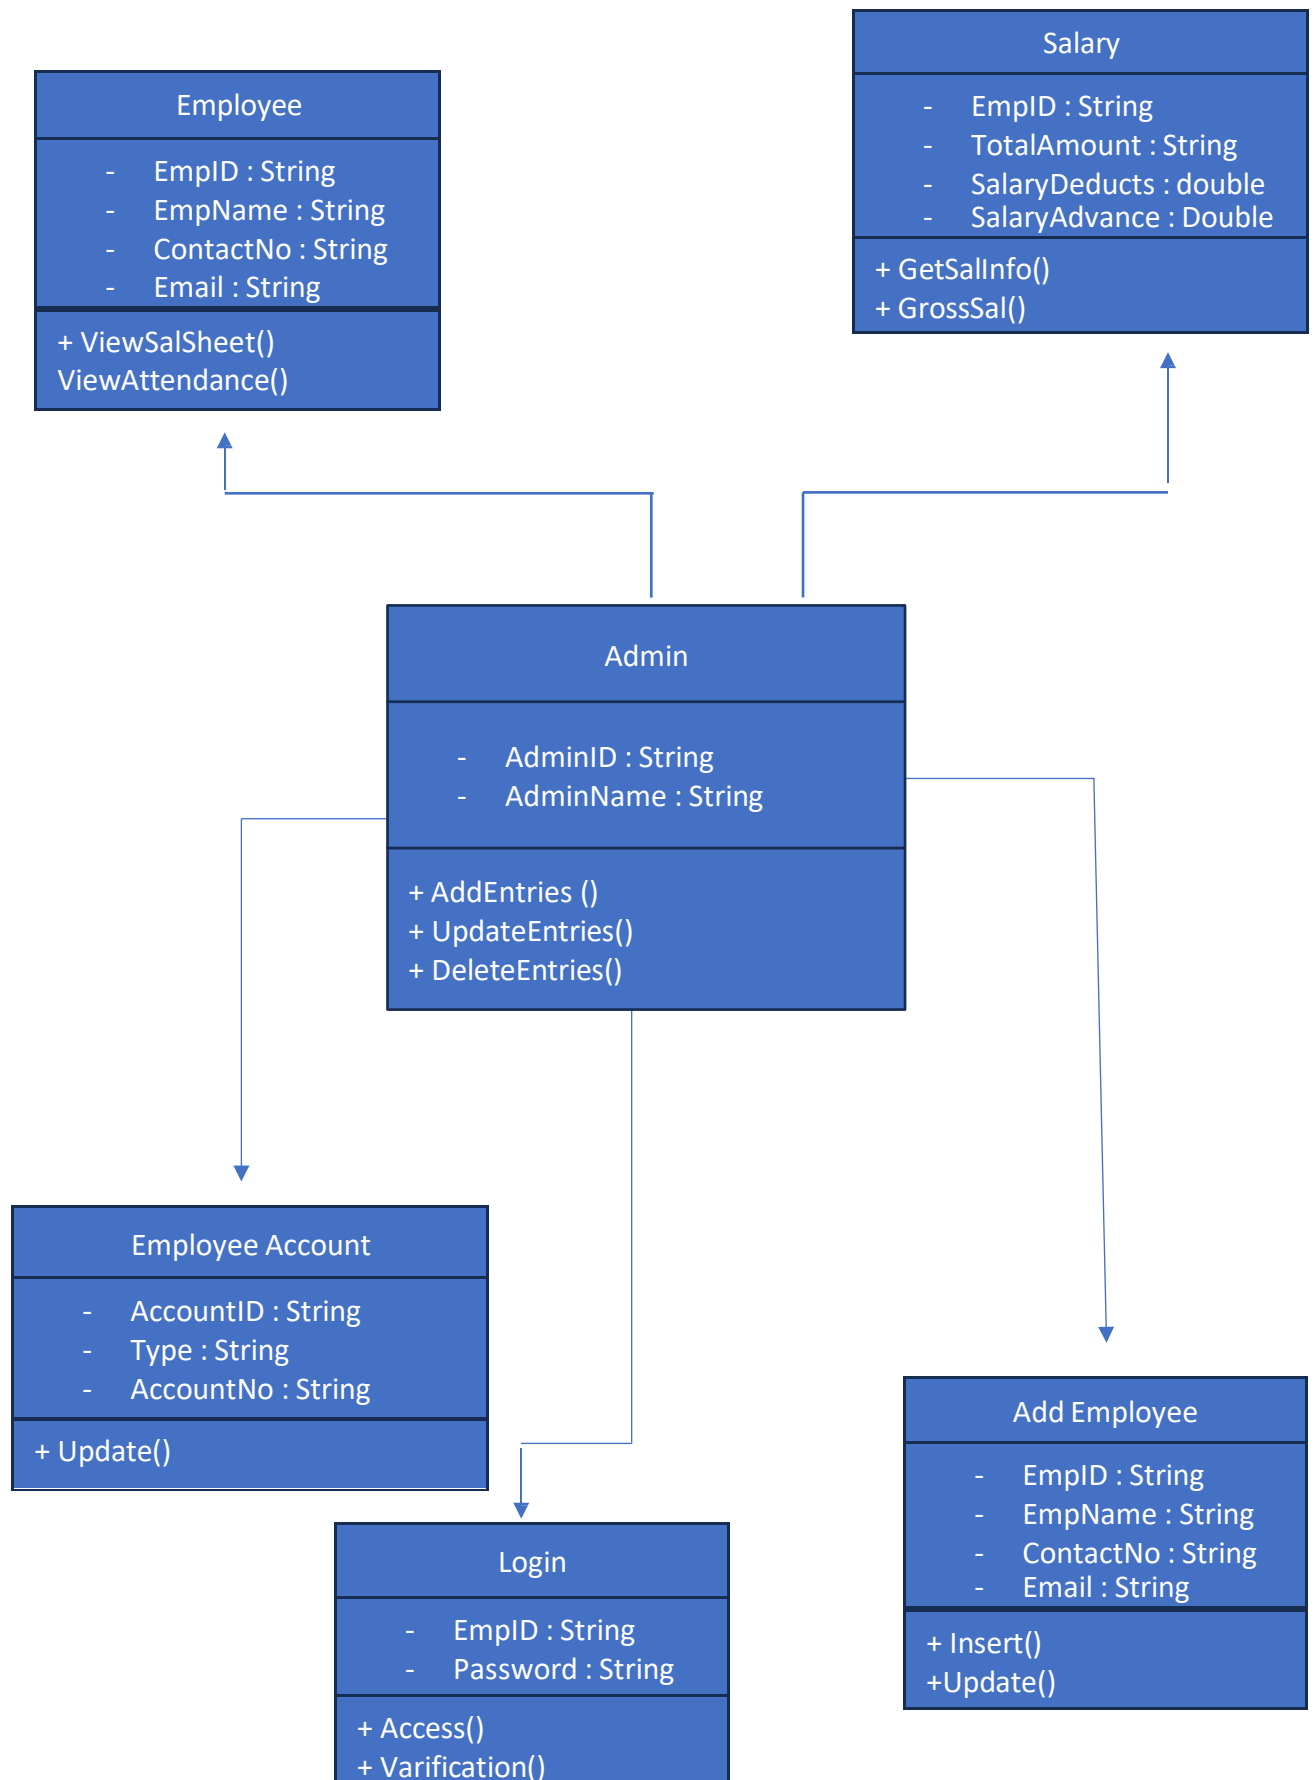

- **USECASE DIAGRAM**

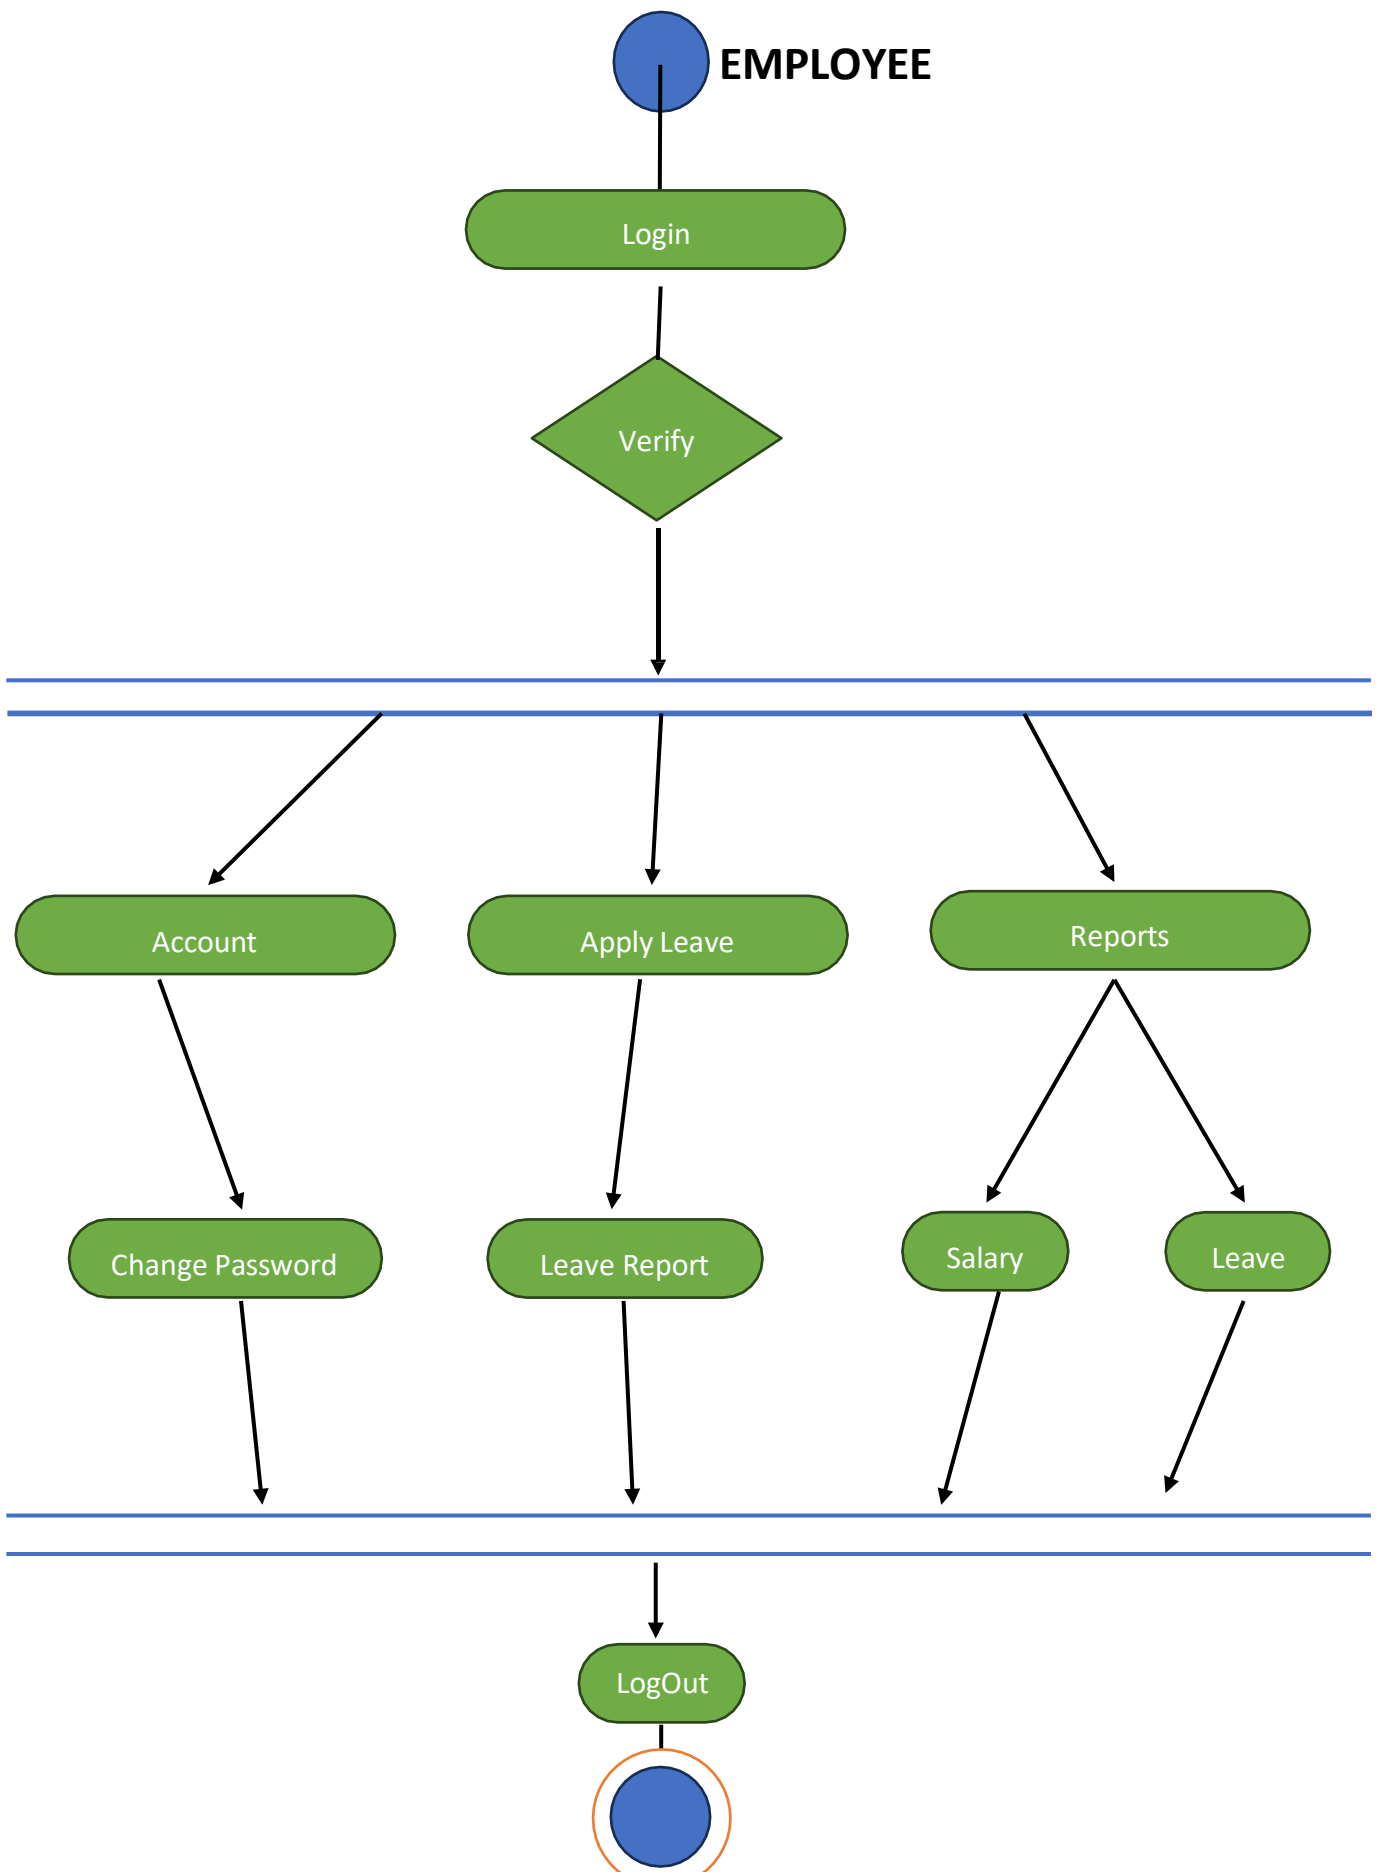

- SEQUENTIAL DIAGRAM

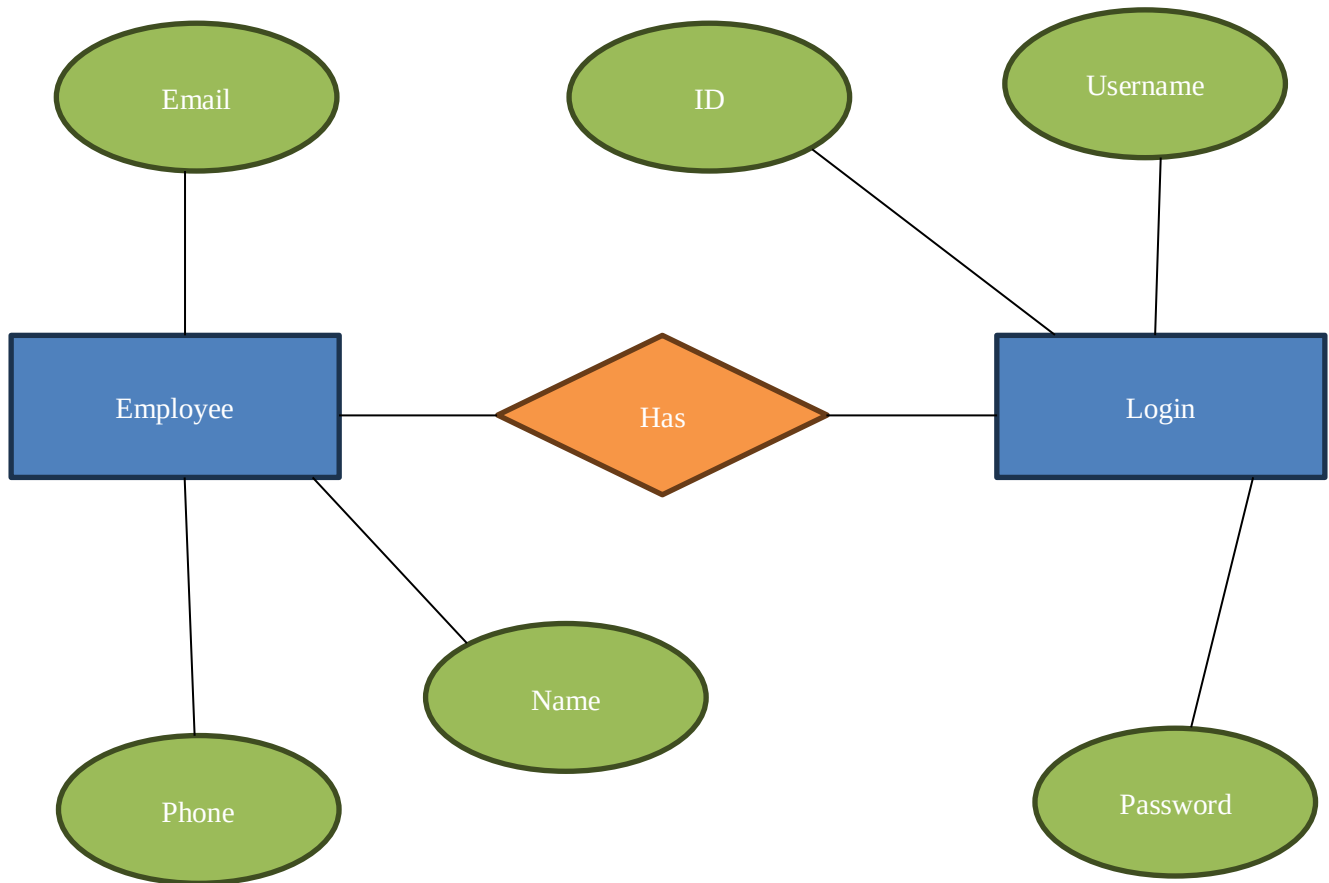

- **CLASS DIAGRAM**

- ACTIVITY DIAGRAM

- **Entity Relationship Diagram**

- OUTPUT OF THE PROGRAM

```
*****Welcome to the Employee
Management System*****

1). Add Employee to the DataBase
2). Search for Employee
3). Edit Employee details
4). Delete Employee Details
5). Display all Employees working in
   this company
6). EXIT

Enter your choice :
1
Enter the following details to ADD list
:

Enter ID :001

Enter Name :
Jay
Enter Salary :
20000
Enter Contact No :
1234567890
Enter Email-ID :
jay@gmail.com
```

• TESTCASES FOR THE MINI PROJECT

1. Select your choice

Here you can choose 6 different type of choice.

2. Choice one

Input – “1”

Output – You can add the new employee details in the management system.

3. Enter ID

Input – “ID”

Output – Here you can add id no. of an employee.

4. Enter Name

Input – “Name”

Output – Here you can save the employee full name.

5. Enter Salary

Input – “Salary in Rupees”

Output – Here you can add employee salary in Rupees.

6. Enter Contact No.

Input – “Contact No”

Output – Here you can add and save employee contact no.

7. Enter email-ID

Input – “Enter email-id”

Output – Here you can add employee’s email-id.

8. Choice two

Here you can search for employee that work in your company.

9. Choice two

Input – “Any employee’s ID.

Output – If you write any employee’s id, this project show you that employee’s all details.

10. Choice three

Here you can change any employee's ID, Name, Salary, Contact no, Email ID.

11. Choice four

Here you can remove any employee's details.

12. Choice five

Input – “Choice five”

Output – It will show you all the employee's details that work in your company.

13. Choice six

Input – “Choice six”

Output – If you choose choice six, You close your work/this project.

• LEARNING DURING PROJECT

- Choose a simple project
 - Select a small project idea that aligns with your current level of Java language knowledge. Example could include an Employee Management System.
1. Study Relevant Concepts
 - As you encounter new concepts and functions, refer to Java language documentation, textbooks, or online tutorials to understand them better. Topics like variables, loops and functions are essential.
 2. Write code incrementally
 - Start with the basics and build your project incrementally. Test each part as you go to ensure it works before moving on to the next.
 3. Debugging
 - Debugging is an important part of the learning process. When you encounter errors, use debugging tools and print statements to identify and fix them.
 4. Share and Discuss
 - Share your project with others, whether it's friends, mentors, or online communities. Discussing your code can lead to valuable insights and suggestions for improvement.
